

World Agricultural Supply and Demand Estimates

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-194 - June 10, 1986

* * * * *

Early-Season Projections

Projections of 1986/87 crop production, use and prices in this report are highly tentative. These early-season assessments will be modified as the season progresses by both positive and negative factors, including weather developments, economic activity and policy or program changes. The output projections in this report, with the exception of U.S. winter wheat, are based on trend analyses and judgment and generally are not based on crop surveys. U.S. production estimates by the Agricultural Statistics Board will be adopted for other crops as they become available. Reliability tables showing the historical accuracy of June supply/use projections are presented on pages 27-29.

* * * * *

HIGHLIGHTS

Global supply-use projections for 1986/87 are little changed from a month ago. (Note: Projections have not been adjusted to reflect the Soviet nuclear accident at Chernobyl because of continuing lack of information.) Among crops, world wheat and coarse grain production prospects are down because of dry, hot May weather in a few countries. Most notably, the Soviet grain production estimate was reduced 5 million tons.

U.S. corn and sorghum export prospects continue to lag, adding to prospective coarse grain supplies next season. U.S. crop exports for 1986/87 still are projected to show substantial increases from reduced 1985/86 levels, except for soybeans which are expected to decline slightly from this season's increased level.

U.S. meat production continues to exceed year-ago levels because of larger beef and poultry output. As meat supplies ease in the second half of 1986, cattle prices should strengthen and hog prices are expected to remain above year-earlier levels.

GRAINS

Wheat. The world wheat production projection for 1986/87 was lowered because of reduced prospects for the USSR, the EC-12, China, and Eastern Europe. Persistent dryness and high temperatures in some areas of the European USSR have reduced Soviet wheat prospects. The U.S. winter wheat forecast was lowered by 25 million bushels. The forecast for Soviet imports was increased, as was expected global trade in 1986/87.

1A3 20511(64)

Slight reductions were made for the 1985/86 wheat crops in Australia, China, and Eastern Europe. Global trade fell slightly in 1985/86, with a reduction in EC trade based both on reduced prospects and a switch to an 11-month marketing year for 1985/86.

Adjustments in U.S. forecasts for 1985/86 included a slight upward revision in exports, a resulting decrease in ending stocks, and June 1 reported data for stocks under Government programs. For 1986/87, the carryout was lowered because of the reduced crop estimate.

Coarse Grains. The major change in global coarse grain output projections for 1986/87 was in barley, with reductions for the USSR and the EC-12, especially Spain and France. A reduced Thai corn projection was offset by an increase for Eastern Europe. Global trade in 1986/87 remains about the same as last month with a small increase in expected Soviet imports. For 1985/86 the estimate of South Africa's corn crop was reduced, based on lower yield estimates. Forecast global trade for 1985/86 was cut sharply, with reductions in expected import demand in several markets, as importers are delaying corn purchases until after the new U.S. crop is harvested under a much-reduced loan rate.

The main changes in 1985/86 U.S. forecasts this month were a 100-million-bushel drop for corn exports and a 50-million-bushel decline for sorghum. Corn ending stocks are now expected to reach almost 4 billion bushels on September 1, compared to the previous record of 3.5 billion bushels for 1982/83.

Rice. The only significant change was a 1-million-ton upward revision in China's 1985/86 crop estimate. No U.S. price forecasts are shown, pending redefinition of average prices with the new marketing loan.

OILSEEDS

The outlook for U.S. soybeans for this marketing year and next is little changed from last month. The U.S. soybean crush was lowered slightly for 1985/86 because a decline in domestic meal use more than offset an upward revision in soybean meal exports. Larger soybean meal imports in Egypt and a cutback in Brazilian meal availability have improved U.S. meal export prospects in the past month. U.S. soybean meal exports are still projected to decline in 1986/87, but are above last month's indications. Consequently, crush for next year was revised upward.

Forecast soybean imports by the USSR and EC-10 have increased. Brazil's soybean exports for 1985/86 were raised this month, leaving U.S. soybean export prospects unchanged.

A large upward revision in China's 1985/86 soybean crop was made this month, based on China's official data. U.S. soybean oil exports for 1985/86 were marginally reduced. Large upward revisions in supplies of palm and coconut oils will result in a heavy buildup of world stocks.

LIVESTOCK, POULTRY, AND DAIRY

U.S. total meat production for 1986 is expected to be up about 1 percent from the year-earlier level. Increased poultry output will more than offset slightly smaller red meat production.

1B2 20511

(2)

The beef production forecasts for this spring and summer have been increased. Slaughter likely will run above previous expectations, partially as a result of poor pasture conditions in some areas and continued low cattle prices. These factors are contributing to high levels of beef cow slaughter, and with the low cattle prices, there is still little incentive for producers to expand the inventory. Apparently, cattle have been placed on feed at heavy weights this spring and will have a short feeding period. This likely will boost summer output above previous expectations. Beef prices will remain under pressure. However, purchases of beef for export to Brazil should lend some support to cattle prices in the coming months.

Hog and broiler prices have been above previous expectations. Hog prices have been supported by declining slaughter and lower pork and hog imports than a year ago. Broiler prices have been getting a boost from a strong demand, particularly from the fast-food industry. Both the hog and broiler price forecasts have been increased slightly. The dairy supply, use, and price forecasts are unchanged from last month.

COTTON

Prospects for 1986/87 are for a balance between world cotton supply and demand with little change in stocks. Both production and consumption may total around 75.2 million bales, slightly below month-earlier indications. While production is down slightly from 1985/86, owing primarily a smaller U.S. crop, world use is projected to increase nearly 3 percent. This increase, coupled with some stock rebuilding in foreign importing countries, is expected to boost world trade by about one-tenth.

With the 1986 cotton program encouraging smaller production and making U.S. prices competitive in domestic and export markets, U.S. stocks are projected to decline sharply in the coming season. Production is placed at 11 million bales, nearly one-fifth below 1985. Total disappearance is expected to rebound to nearly 13 million bales, the largest since 1979/80. Exports may approach a more normal level of about 6 million bales, triple the 1985/86 level. Projected mill use of 6.8 million bales would be the highest since 1975/76. Ending stocks are projected at 7.7 million bales, nearly one-fifth below the beginning level but still sharply in excess of normal requirements.

APPROVED:

SECRETARY OF AGRICULTURE

1/ Marketing year beginning August 1. 2/ Reliability calculations at end of report. 3/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt.): 1984/85, 1.6; 1985/86, 1.3; 1986/87, 1.3. 4/ Residual: processing losses and estimation errors. Use by type does not add to total rice use because of the difference in brokens between beginning and ending stocks. 5/ No price forecast is made at this time as NASS is currently revising the definition of average price, because of the effect of the marketing loan. 6/ Includes imports. NOTE: Totals may not add due to rounding.

1/ Upland and extra-long staple; marketing year beginning Aug. 1. Totals may not add and stocks may not balance due to rounding and differences unaccounted between ending stocks based on Bureau of Census data and the previous season's supply less total use. 2/ Reliability calculations at end of report.

3/ Based on Bureau of the Census data. 4/ Includes imports.

5/ Season average farm price, domestic measure, cents per pound; metric measure, dollar per kilogram. 1985/86 values are weighted averages for the first eight months of the marketing season; not a projection for 1985/86.

6/ USDA is prohibited from publishing cotton price projections.

1B4 20511

(26)

Note: Tables on pages 27-29 present a 5-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 16.7 million tons (3.4 percent) ranging from 13.0 to 22.2 million tons. The June projection has been below the estimate 3 times and above 2 times.

The World Agricultural Supply and Demand Estimates were approved by the Interagency Commodity Committees for:

FEED GRAINS: Eileen M. Manfredi, Chairman, WAOB; Chris Goldthwait, FAS; Orville I. Overboe, ASCS; Ralph Tapp, AMS; Sam Evans, ERS.

WHEAT: Eileen M. Manfredi, Chairman, WAOB; Chris Goldthwait, FAS; Ralph Tapp, AMS; Randy Weber, ASCS; Sam Evans, ERS.

RICE: Eileen M. Manfredi, Chairman, WAOB; Chris Goldthwait, FAS; Ralph Tapp, AMS; Eugene Rosera, ASCS; Sam Evans, ERS.

SOYBEANS, COTTONSEED, AND OILS: Jim L. Matthews, Chairman, WAOB; Richard T. McDonnell, FAS; Sam Evans, ERS; Ralph Tapp, AMS; Louise Lynch, ASCS.

DAIRY: James E. Nix, Chairman, WAOB; Jack Mills, FAS; Charles Shaw, ASCS; Robert R. Miller, AMS; Clifford Carman, ERS.

MEAT ANIMALS: James E. Nix, Chairman, WAOB; Jack Mills, FAS; Charles Shaw, ASCS; Ralph Tapp, AMS; Ron Gustafson, ERS.

POULTRY: James E. Nix, Chairman, WAOB; Jack Mills, FAS; Charles Shaw, ASCS; Jack Ross, AMS; Allen Baker, ERS.

COTTON: Russell G. Barlowe, Chairman, WAOB; Henry Wagley, FAS; Carol Skelly, ASCS; Fred Mullins, AMS; Sam Evans, ERS.

GET A WEEKLY WORLD WEATHER AND CROP SUMMARY OVER THE COMPUTER

Each Tuesday afternoon, you can now receive by computer a summary of the past week's weather patterns and potential crop impacts for key agricultural areas. The summary is released by the Joint Agricultural Weather Facility at USDA's World Agricultural Outlook Board. To learn how to receive this service, contact Russell Forte, USDA, (202) 447-5505. For more details on the summary's content, call Dr. Ray Motha, WAOB, (202) 447-5716.

EXCERPTS FROM THE INTERNATIONAL WEATHER AND CROP SUMMARY
RELEASED ELECTRONICALLY JUNE 10, 1986

UNITED STATES ... Rain across the southern and central Great Plains provided moisture for spring-planted crops but delayed the harvest of winter grains. The wheat harvest had started earlier than normal. A few brief showers caused minor delays in the completion of spring wheat planting after two weeks of rapid progress. Planting was interrupted by showers across the central and eastern corn belt where progress was ahead of average. Scattered showers and hot weather continued to stress crops in the southeastern states, where persistent dryness had delayed planting. "Andrew", the season's first tropical depression, brought light to moderate showers to the coastal and piedmont areas of North Carolina. Excessive rains caused some flooding and delayed fieldwork in the New England States.

AUSTRALIA ... Rainfall further diminished this week across the wheat belt. High pressure deteriorated slightly allowing a weak frontal system to move across the southern fringe of the country. Light showers (1 to 3mm) fell in South Australia and Victoria where no significant rain has fallen in 2 weeks and topsoils are becoming dry. Dry weather continued in northern New South Wales and southeastern Queensland, delaying wheat planting and stressing earlier planted wheat. Temperatures averaged above normal in the northeastern wheat belt, further depleting the limited moisture. Light showers fell in the southern wheat areas of Western Australia, where moisture is mostly adequate.
